

## H2 - Saving a custom defined graph as a favorite

This how-to page reviews how to save a custom graph in a list of favorites. This ability allows the user to create custom graphs that can be added as an item in a custom print layout. The saved graphs can also be automatically published into external spreadsheets or reports and allows the user to quickly review the computed results at the locations of interest without having to plot the time series each time.

1. Plot the time series you wish to include in your saved favorite.

2. In the **Graph** panel click on the **Add** button and name your graph.
